

## Amigo Chatbot – User Setup Guide

Welcome to Amigo Chatbot Setup. This guide will walk you through the simple 3-step process to activate your local AI connected to WhatsApp.

To get started, visit the GitHub Releases page and download the latest Windows installer for the complete EllStack AI stack : [https://github.com/aldovictoriag/ellstack\\_amigo/releases](https://github.com/aldovictoriag/ellstack_amigo/releases)

### Step 1: Upload Your Knowledge Base File

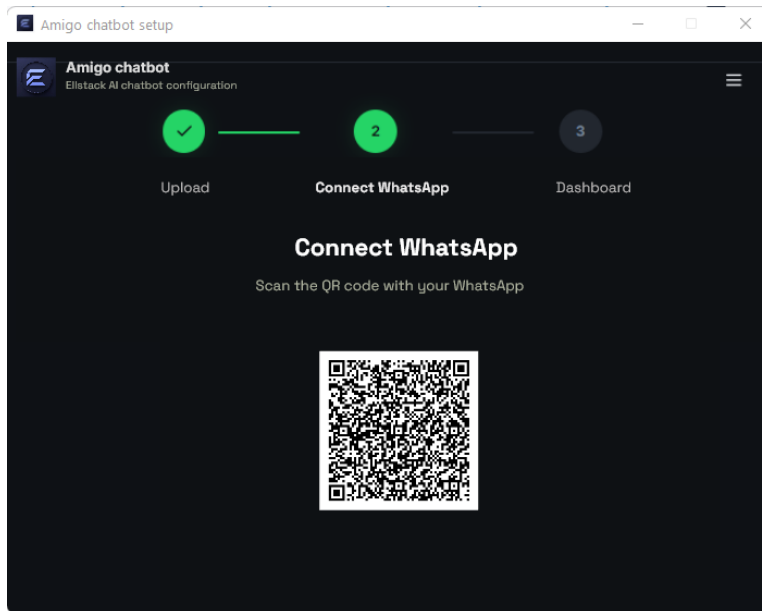

Upload a PDF, Excel, TXT, Docs,CSV file containing your company information or any data you want the AI to use as a reference when responding to WhatsApp messages.

Instructions:

1. From windows start menu, Open Amigo Setup.
2. Click 'Browse Files' or drag and drop your file.
3. Wait until the upload process completes successfully.

## Step 2: Connect WhatsApp

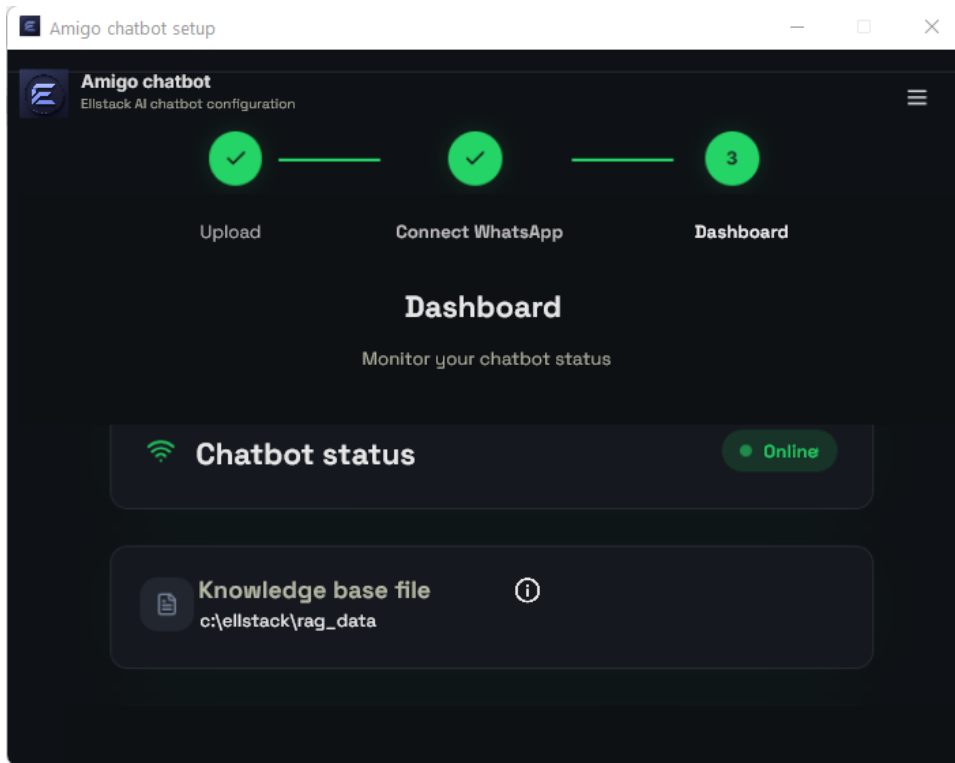

Connect your WhatsApp account by scanning the QR code using the 'Linked Devices' option inside WhatsApp.

Instructions:

4. 1. Open WhatsApp on your phone.
5. 2. Go to Settings > Linked Devices.
6. 3. Tap 'Link a Device'.
7. 4. Scan the QR code displayed in Amigo Setup.

### Step 3: Dashboard & Go Live

Once connected, your chatbot will be online. You can monitor its status from the Dashboard screen.

You are now ready to enjoy your local AI assistant!

Your AI runs locally and uses your uploaded data as a knowledge base to intelligently respond to WhatsApp messages.

## **Congratulations!**

You have successfully configured Amigo Chatbot.

You are now running a fully local AI system connected to WhatsApp, using your own data as a trusted reference for generating responses.
